Applied NanoWorks is Now Auterra Inc.

Malta, New York, April 16, 2009. Auterra, Inc. announced today it has completed the process of changing its name from Applied NanoWorks. The name change is due to the company's discovery of a new, clean technology materials platform that expands its business focus into global markets for material additives and chemical processes.

Originally founded to commercialize a proprietary nano-materials technology, the company discovered greater commercial value at the molecular level with its new Molecular Control Process™ (MCP), which enables fundamentally simpler pathways to high performance catalysts, polymers and coatings. The company is targeting the flame retardant additives and the oil refinery catalyst markets with its' first products. As a materials platform, MCP offers tremendous materials advancement potential.

About Auterra Inc.

Auterra Inc is a clean energy company, specializing in catalyst and process technology for the purification and upgrading of crude oil and oil distillates. Auterra is located in Malta, NY at the Saratoga Technology + Energy Park (STEP)
STEP is the nation's first park dedicated to renewable and environmental - friendly, clean energy technologies.
